

TEST & MEASUREMENT

For over 90 years, IDEAL INDUSTRIES, INC. has been enhancing the productivity of electrician's who test, measure, or troubleshoot electrical systems. In 2021 we released a new line of testers with the professional electrician in mind. See our new additions in this catalog.

CIRCUIT TRACER TRANSMITTER FEATURES

CertainCircuit™
(TR-955)

CertainCircuit™

After the correct breaker has been identified and tripped, the transmitter senses the loss of power and sends a different signal back to the receiver at the panel to give the user confidence that the right circuit has been de-energized.

Energized

De-energized

Traces de-energized circuits

Inductive Clamp for when direct contact with alligator clips is not possible

TR-955

US LISTED

Inductive Clamp & Battery Pack
(For use on circuits carrying up to 120V AC w/less than 5 Amps)
IC-958 | BP-958

Cradle
(For use on RC-955 & RC-959 Receivers)
CR-959

Tracer Test Lead Set
TL-956

1. 3 Ft. Lead Adapter for Transmitter (set of 2)
2. 25 ft. Lead Adapter for Transmitter
3. Alligator Clips (set of 2)
4. Blade Prongs
5. Prong for Lead Adapters
6. Outlet Plug Adapter for Transmitter

CIRCUIT BREAKER FINDER

TEST & MEASUREMENT

CIRCUIT BREAKER FINDERS FEATURES

LED Flashlight
operates independently and illuminates work area

Transmitter
sends a signal over the conductors when connected to an energized circuit. It also identifies the presence of power and indicates correct/incorrect wiring conditions via illuminated Green and Red LED's. A GFCI test light illuminates when the GFCI Test button is pressed, indicating the activation of the GFCI test. The GFCIs will trip if they are functioning properly.

NOTE: Receptacle MUST be properly grounded for the GFCI test to work properly.

NOTE: The transmitter works on LIVE/Energized circuits only

Narrower Tip
improves breaker identification accuracy

Receiver
powers off automatically after five minutes of non-use to conserve battery life

Lanyard Mount

NCVT
in receiver tip indicates presence of AC voltage between 80-300 volts (visual flashing red LEDs & audible indicators)

Receiver
reads the transmitter's signal and identifies the breaker/finder energizing the circuit by illuminating a flashing green LED and emitting beeps once it determines the breaker/fuse with the strongest signal.

LED Flashlight

Audible Defeat
for noise sensitive areas

On/Off toggles between circuit breaker finding and NCVT functions (default circuit breaker finding)

61-535

120V AC Circuit Breaker/Fuse Finder w/Flashlight, NCVT & GFCI

SAFETY IN THE FIELD

IEC (International Electrotechnical Commission) Category Ratings

Category I – The signal level for telecommunications, electronic and other low-energy equipment with transient limiting protection. Peak impulse transient range is 600-4,000 volts with 30 ohm source.

Category II – The local level for fixed and non-fixed powered devices including appliances, lighting and portable equipment. Outlets located more than 30 feet from CAT III sources and 60 feet from CAT IV sources. Peak impulse transient range is from 600-6,000 volts with a 12 ohm source.

Category III – The distribution level for fixed primary feeders or branch circuits. Circuits that are separated from CAT IV sources by at least one level of transformer isolation. Peak impulse transient range is 600-8,000 volts with a 2 ohm source.

Category IV – The primary supply level for the highest levels of transient over voltage. Includes the utility service both outside and at the service entrance, service drop from the pole to the building, overhead line to remote buildings, and underground line to a well pump. Peak impulse transient range is 600-12,000 volts with less than a 1 ohm source.
